

We have Come up with an idea of a VR Game That Amaze peoples and give them a taste of Horror.

We have planed the game in a unique way.

A game that is wrapped up with a tinge of thriller & horror effects.

A game that makes us to sit in the edges and that has nail biting scary moments.

The Story moves on Like....

The player is seated in between the forest at the middle of dusk near his jeep.

He/She is chilling away at the midnight with a camp fire.

All of a sudden he is experiencing weird and an abnormal noise that is scary.

As it was already late he planned to leave the forest

At that time his jeep key went missing inside the dark forest.

Suddenly he gets a note form somewhere

in which it had a message and a map to find the key

now our player enter's the forest in dark,

which is filled with many daunting and fearsome moments,

now He/She starts to move towards the place that was mentioned in the map,

as He/She move towards the destined place.

He/She comes across many territying objectives that makes the player very nervous.

There He/She finds a house that has been isolated and abandoned.

The player walks through the house with fear and there He/She finds number of rooms with scary and feared elements as per the note only one room holds the key.

Now the player has to find the key in order to get out of the forest after finding the key when the player reaches the ieen the game ends.

after finding the key when the player reaches the jeep the game ends.

In this game we have added very creepy and thrilling moments

We are working on this piece of horrified game to be published soon.

This game can be developed within two working days.

Except the horror asserts everything in the game will be developed by us.

The background images that has been used in this proposal is similar to the Game's Theme.
